

ARCAD V25.2

New Features

Version 25.2 of the ARCAD suite brings significant improvements to several flagship products in the ecosystem, with a strong focus on software quality, security, IBM i application modernization, and industrialization of DevOps processes.

DISCOVER

Standalone brand

Some features previously included in ARCAD Discover are now delivered under the new DISCOVER product line. This shift better addresses the challenges of application knowledge and technical governance in multi-technology environments. Enhancements related to Data Lineage and the Functional Tree have been moved to the **DISCOVER Release Overview**.

ARCAD CodeChecker

Enhanced quality control

- A new dedicated web interface for managing rules, campaigns, and code reviews
- Greater independence from traditional development environments (RDi/VS Code)

ARCAD Transformer Microservices

Automating modernization

- Simplified web service generation from VS Code
- Automatic detection of similar code
- Improved detection of parameters within procedures

ARCAD iUnit

Streamlined unit testing

- Improved VS Code interface
- Creation of test cases directly from the 5250 interface

Docker

Easier deployment

Many ARCAD tools are now available through Docker images, enabling modern and automated deployment in your environments.

ARCAD Verifier

Smarter testing

- Test coverage mechanism: minimum threshold required to validate tests
- Support for partitioned tables

ARCAD V25.2 strengthens your DevSecOps pipelines on IBM i by combining security, performance, and automation. For questions or to request a personalized demo, contact your ARCAD representative or email us at info@arcadsoftware.com.
